artdrelo@gmail.com

SUMMARY

Senior Game Developer with 9+ years building Unity-based games, gameplay systems, and technical tools across mobile, VR/AR, and live-service projects. Experienced in leading cross-functional teams, shipping on iOS/Android, and improving performance, pipeline workflows, and player-facing game feel. On my journey as a developer, I have acquired strong knowledge in SOLID principles and OOP for video games and how those can improve a multidisciplinary team's workflow.

Illustrator/2D artist in my free time, with great knowledge of composition, color theory, shaders programming and game feel. My main focus in recent years has been creating game mechanics that feel compelling to the player while preserving a great balance on aesthetics.

EXPERIENCE

Scubalight Studios, Senior Game Developer

May 2025 - Sep 2026, Canada (Remote)

Was part of **Amber Studio's Co-development team** to work alongside **Sago Mini's** team on the development of Sago Mini Jinja's Garden, a game released on iOS devices as part of Apple Arcade's repertoire, and Dreamworks's Gabby's Dollhouse: Cat Games, an Android/iOS game based on the ongoing Netflix's series "**Gabby's Dollhouse**".

- Built gameplay features and **Unity Editor tools** for design and technical art teams, while integrating external tools into the **build pipeline** for production use.
- Configured the build pipeline to support an automated localization screenshot workflow for QA, reducing manual validation effort during major UI updates.
- Worked on adding **Nintendo's Joycons support** and **QR Codes Scanning** through third party SDK integration.
- Developed **2D and 3D physics-based gameplay mechanics** using a component-driven architecture, balancing player feel with implementation simplicity for designers and artists.
- Improved other editor tools that already existed to reduce development times for art and technical art teams.
- Created some **shaders and visual effects** to improve game feel on some features and solve technical problems that involved both art and programming skills.

RM2, Senior Game Developer

Feb 2023 - Mar 2025, Medellín/USA (Remote)

Worked on maintenance and feature development for Coin Dozer(100M+ downloads) and Coin Dozer: Casino (10M+ downloads), collaborating for a team of 8+ cross-disciplinary members from **USA and Colombia**.

- Replaced the old native purchasing system with **Unity IAP SDK** across Android/iOS, improving purchase flow reliability, adding subscription options for players and simplifying maintenance on such systems.
- Assisted the replacement of the metrics package (**Firebase**) for a new one, making sure the update transition wouldn't have any kind of impact on the app, the current player base and their gameplay experiences.
- Edited the **post-processing scripts of the build pipeline** to add new setups required on iOS builds for multiple new features.
- Assisted multiple updates on the live version, solving possible bugs while going through proper testing to make sure each feature worked as intended for new and old players.
- Refactored legacy code and **progression/subscription** systems, added shaders and particle effects, and supported a **Halloween event**, contributing to a **4.2-star** store rating and crash rates below **0.5%**.

TGA, Tech Lead

May 2022 - Feb 2023, Miami (Remote)

Led a team of developers from **across South America** in the development of 5+ training and educational games featuring client-server architecture (including account/login systems, leaderboards, and progress sync).

- Managed and mentored 6 developers across South America, using tailored training to improve team productivity.

SKILLS

Engine/Programming:

Unity 3D/2D
C#
OOP/SOLID
Optimization
Project/SDK Maintenance
UI/UX Programming

Gameplay:

Game Mechanics
Game Feel
Physics
Shaders
Technical Art (VFXs)
Particle Systems

Platforms/Systems:

iOS/MacOS
Android
VR/AR
WebGL
CI/CD
Client-Server

Leadership:

Tech Lead
Mentoring
Project Management
Cross-functional collaboration

LANGUAGES

Spanish
(Native Speaker)

English (Professional Working Proficiency)

- Worked alongside the Art, Design and Product teams for clients of major Latin American companies like Cruz Verde, Olé, Bimbo and others, to create gamified apps that met their expectations and needs.
- **Architected scalable solutions** for projects, focusing on server communication and data persistence.
- Integrated new pipelines for **CI/CD and Git branching**, improving workflow with the QA team.

Indie Level Studio, Tech Lead
Oct 2017 - May 2022, Medellín (Hybrid)

Directed development of 15+ training, educational and casual games. Worked on the development of the game **Logicubes: Turn-Based Puzzle**, focusing on UI behavior, animations, saving/progression system and various game mechanics. Was responsible for project's architecture planning and development, code maintenance and **UI/UX review for VR, AR and serious games** projects for diverse platforms like HTC Vive, Oculus Quest 1.0, Windows and Android.

- Designed **modular gameplay systems** for movement, progression, and animation to support rapid iteration across projects.
- Trained interns and junior developers in Unity/C# best practices.
- **Optimized performance** for Android/Windows, ensuring consistent 60 FPS on mid-tier devices.
- Designed **gameplay loop architecture** for each project alongside the game design team.
- Created and maintained multiple **Casino Games** that were connected through **UnityWebRequest** to a private backend for all gambling-related calculations.
- Continuously worked on the integration of **multiple SDK's and third party packages** for each corresponding VR device/project.

Tecnoparque, Junior Game Developer
Mar 2017 - Sep 2017, Medellín (On site)

Worked on a VR architectural tour for HTC Vive and AR virtual fitting room for Kinect 2.0

EDUCATION

Servicio Nacional de Aprendizaje SENA,
Game Developer - Associate Degree
Jan 2015 - Dec 2017, Medellín

While going through this degree, I covered various areas of knowledge necessary for the end-to-end development of casual and hyper-casual video games using Unity as my main game engine. Key topics include: character creation, game design, GDD and high concept creation, video game pitching, monetization, narrative, C# programming and level design, using Unity 5 for both 3D and 2D projects.

Universidad Nacional de Colombia,
Undergraduate Coursework in Civil Engineering
Jan 2011 - Jun 2014, Medellín

Completed advanced coursework in Calculus, Linear Algebra, and Physics, applying these fundamentals to 3D game physics and shader mathematics.
